DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Information Disclosure Statement

2. The information disclosure statement (IDS) submitted on 1/04 & 3/05 is in compliance with the provisions of 37 CFR 1.97. Accordingly, the examiner is considering the information disclosure statement.

Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-4, 7-15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nakamura et al (6458502) in view of Shigemori et al. (5741618). Nakamura et al teaches a toner obtained by polymerizing a polymerizable monomer and a colorant. The circularity of the toner is taught in Col.20. Fluidity-providing agents are taught in Col. 17 and the peroxide type initiators such as di-t-butyl hydroperoxide are taught in Col. 11. It is known to incorporate wax into toner particles note applicants' page 7 and Col. 2.14 & 15. Applicants' page 11 have found that a trace amount of t-butanol in a toner will allow the wax to migrate toward the toner surface to improve the anti-blocking and flowability

Application/Control Number: 10/726,503 Page 3

Art Unit: 1756

of the toner. Nakamura et al fails to teach the half-life of the oil-soluble polymerization initiator. Shigemori et al teaches the use of t-butyl hydroperoxide having a 10-hour half-life note Col. 6 lines 20-65. It would be obvious to one of ordinary skill in the art at the time of applicants' invention with a reasonable expectation of success to use the polymerization initiators with known physical properties as the initiators in the polymerization of monomers in the preparation of toner particles to control the off-set and anti-blocking of the toners.

4. Claims 4 & 5 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to John L. Goodrow whose telephone number is 571-272-1384. The examiner can normally be reached on Monday -Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Mark F. Huff can be reached on 571-272-1385. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Application/Control Number: 10/726,503
